

# Design & Manufacturing Ideas

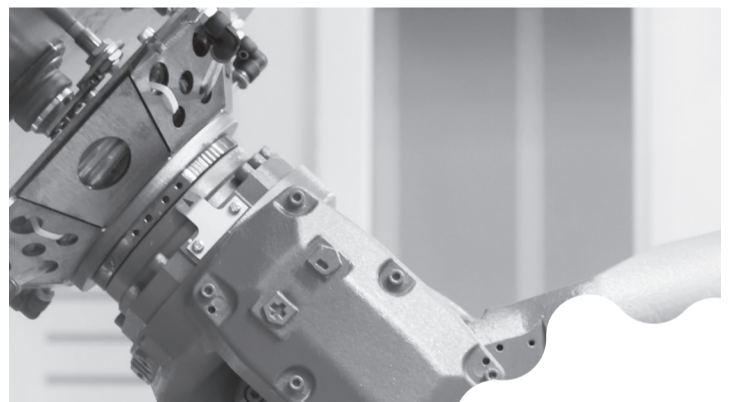

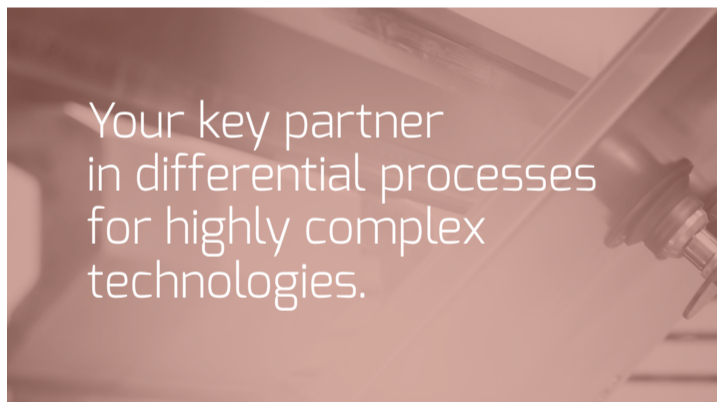

Technology, flexibility, innovation, commitment  
**at the service of our customers.**

## Who we are

Smarmec is synonymous with experience in the design, industrialisation and manufacture of mechanical, electrical and electronic engineering solutions.

We are experts in joining technologies and cosmetic finishes with the ability to produce unique solutions, prototypes and short series. Our in-depth knowledge of the sector enables us to contribute added value in highly complex processes.

We are part of **Velatia**, a family-run, industrial and technological group with more than **50 years experience**, which is present in **19 countries**, made up of more than **3,200 people** and boasts **16 production centres**.

## Experience and sectors

### Medical devices

- Our experience in this sector makes us a reliable collaborator with whom new products can be developed.
- We provide high adaptability.

### Vending Machines

- Our extensive experience in this field enables us to accompany our customers in the incorporation of the technology that offers a better service to the end user.
- Rapid response capacity to produce new integrated systems.

### Printing

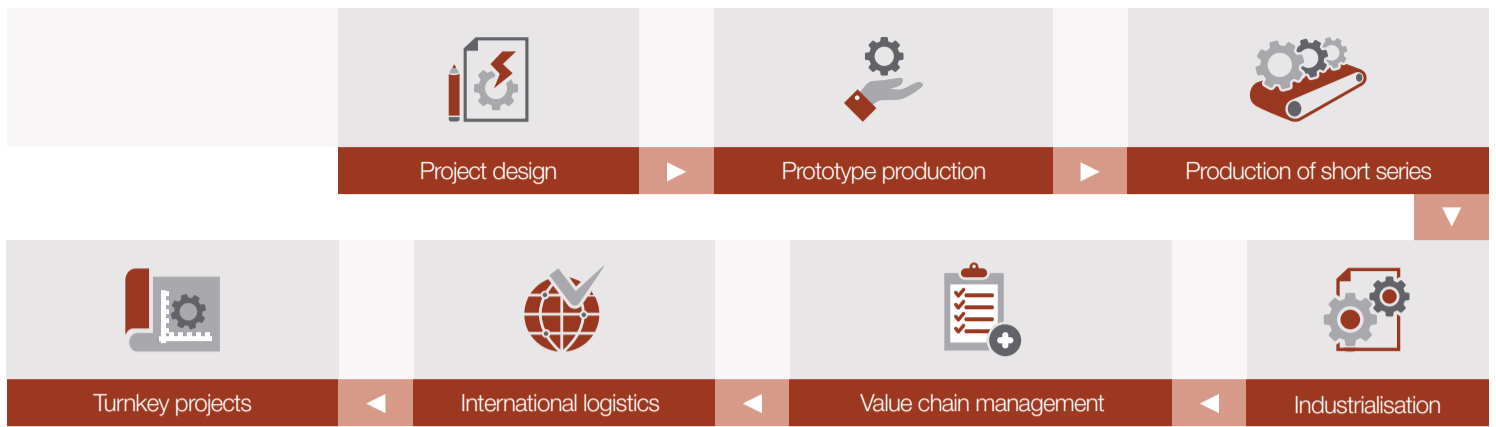

- We are one of the 4 global suppliers for HP large-format printers.
- We design complex paper management systems, manufacturing subsets of high mechanical difficulty to be introduced directly on the HP assembly line.
- We manufacture accessory subsystems, from our facilities to the end customer, with certified quality.

### Energy

- We provide extensive experience in the manufacture of high responsibility mechanical components, specialised joining technologies and innovative materials for this sector under transformation.
- We take on projects in which excellence in joining technologies is required as well as the capacity to make the investments required by each project.
- We have very specific equipment: laser welding centre with artificial vision beam monitoring, plasma welding equipment, robotised CMT, etc.

# We accompany you throughout the process.

## What we do

- We design, industrialise and manufacture mechanical, electrical and electronic engineering solutions.
- We establish close collaboration links with our customers due to the uniqueness of the technologies and the supply chains.
- We manufacture unique solutions, prototypes and short series.
- We provide added value in joining technologies and advanced differential processes.
